# OUTLINE

1. Game and Rules
2. Model Part
3. Viewer/Controller Part (GUI)
4. Demonstration
5. Future Work

Monopoly is a multi-player economics-themed board game. Each player rolls dice to move around, buy and trade properties, etc.

## Rules:

- Number of Players: 2-6
- The game starts by each of the player rolling the dice
- Moving according to the number on the rolled dice

SquareBoard

## Issues that rose during the work

- Connecting part(Transformations)
- Button solution
- Abstraction/encapsulation

```
private void window(){  
    Player player = game.getPlayerAt(game.getTurn());  
    Location location = game.getLocationAt(player.getPosition());  
    String[] options = location.getApplicableActions();
```

## Polymorphism

```
String outputMessage = location.doAction(options[n], player);
```

**THANK YOU!**
